These adapters are probably the most common of the USB to Serial adapters on the PC market. The adapter has a male DB9 connector at the serial port end. To program the Tait radios, the programming cable connects to that and plugs in to the microphone socket with an RJ12 (6 pin) modular plug. So, you can make your own programming cable by connecting a DB9

## **Official Radio Cables Store | Two-Way Radio Programming**

Programming is done using a Windows computer and a USB to serial cable. Ready-made programming cable are available on eBay, but they are pricey (considering what they are). A DIY solution is very approachable. Since the Rx/Tx logic levels are inverted on the Tait serial connector, the FTDI chip must be flashed using the FT\_PROG utility. This requires a genuine FTDI chip (i.e., not one you find on ebay for \$3).
